

PRESS RELEASE

Wellbore Integrity Solutions Introduces TruEdge™, Next Generation Milling and Cutting Structure

HOUSTON, May 20, 2021 – Wellbore Integrity Solutions (WIS) announced today the release of its **TruEdge** milling and cutting structure. The **TruEdge** provides an innovative, cost-saving solution for Well Abandonment and Slot Recovery applications.

“We chose to retain ‘Edge’ to highlight a technology progression from our current ‘WavEdge’ design,” said David MacNeill, President and CEO. “Edge’ is not only about the geometric shape – it also signifies superior performance. This is one of three milling structures in our portfolio: the Millmaster P5, the WavEdge, and the TruEdge.”

TruEdge is intended to be used across a broad range of milling and cutting applications, from section milling and casing milling, to cut and pull systems. This new technology has been successfully tested with several clients in the Eastern Hemisphere, specifically in the North Sea. The test results obtained have confirmed significant rig time savings and improved the overall efficiency of the milling process.
